Affan Javed Shah

Mumbai, Maharashtra — affanjavedshah@student.sfit.ac.in — +91 78209 86147
linkedin.com/in/affanjavedshah — github.com/Codenama-007

Technical Skills

Languages: Python, JavaScript, HTML, CSS
Frontend: React.js, Next.js, Tailwind CSS, Shadcn
Backend: FastAPI, Python, Flask , REST APIS
Databases: MongoDB, PostgreSQL, SQL, MySQL
AI Frameworks: LangGraph, LangChain, LLM, RAG, LLM Evals, Guardrails
Deployment: Vercel, Netlify, Render

Professional Experience

- Built a travel planner agent system (TripPilotAI) using LangGraph, with specialized agents for transport, hotels, destinations, itineraries, and final plan generation, grounded in Tavily web search.
- Built an app saturation detection agent (App Saturation Radar) that searches Product Hunt for products overlapping an app idea, classifies them as direct competitors or related products, and returns saturation and opportunity scores, a verdict, and suggested differentiators.
- Built a market app saturation agent that takes a one-sentence app idea, generates search queries, filters Product Hunt results by relevance, scores similarity in a separate ML service, and uses an LLM to identify competitors, market gaps, and differentiators, with caching for repeated ideas.
- **Security Vulnerability Detector Agent:** Developed an AI-powered website security scanner using Python, LangGraph, Selenium, and Ollama to detect common security misconfigurations and generate risk-scored JSON reports with remediation suggestions.

Projects

Market Saturation App – Major Project — GitHub *In progress*
Python, LangGraph, LangChain, Groq, Tavily, FastAPI, MongoDB, Next.js, React, TypeScript, Tailwind CSS, Clerk

- Currently building a market saturation app as a major project: users describe an app idea in one sentence and get a market verdict, saturation and opportunity scores, competitors, market gaps, and suggested differentiators.

TripPilotAI – Agentic Travel Planning Application — GitHub — Live Demo
Python, LangGraph, LangChain, Groq, Tavily, FastAPI, MongoDB, Next.js, React, TypeScript, Tailwind CSS, Clerk

- Built a graph-based multi-agent workflow that extracts origin, destination, duration, travel mode, and budget from a request, asks the user for any missing details, and routes through flight or train, hotel, destination, location, itinerary, and final agents.
- Integrated Tavily search tools for flights, trains, hotels, and destination research, with retry handling and result limits; passed the user's budget through the workflow as a hard constraint on the itinerary and cost breakdown.
- Developed a FastAPI backend with MongoDB storage for persistent conversations and messages, and a Next.js frontend with Clerk authentication.

Education

B.E. in Computer Engineering *2023 – 2027*
St. Francis Institute of Technology, Borivali, Mumbai
Currently pursuing

Achievements

- Reached Round 2 – Chandigarh Far Away Hackathon *20–21 August 2026*
- Participated in multiple agentic AI hackathons
